DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Information Disclosure Statement

2. The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered. See page 5, lines 20-23; page 12, lines 23-25; and page 24, lines 7-10 of the specification.

Drawings

3. Figures 6 and 7 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Application/Control Number: 09/484,441

Art Unit: 2634

4. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: the reference signs "R counter", "Sref", and "Sdiv" as mentioned at page 4, lines 9-19 of the specification are not shown in Fig. 7. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

5. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

- 6. The lengthy specification has not been checked to the extent necessary to determine the presence of all possible minor errors. Applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.
- 7. The disclosure is objected to because of the following informalities:
 - Page 31, line 17, "Embodiment 1" should be Embodiment 2 --.

Application/Control Number: 09/484,441

Art Unit: 2634

Applicants are requested to clarify exactly how many embodiments are disclosed in the instant application. See the differences mentioned in the Brief Description of the Invention and in the Detailed Description of the Invention.

Appropriate correction is required.

Claim Objections

8. Claim 4 is objected to because of the following informalities: in claim 4, line 3, "has" should be – has: –. Appropriate correction is required.

Claim Rejections - 35 USC § 112

9. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

10. Claims 1-14 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The configuration of claims 1-14 does not correspond to the disclosure of the Drawings. For example, it is unclear exactly how many embodiments are disclosed in the instant application. Wherein the number of the embodiments mentioned in the Brief

Art Unit: 2634

Description of the Invention is different than the number of the embodiments mentioned in the Detailed Description of the Invention.

Claims 1-14 may include different species or embodiments. Therefore,

Applicants are requested to clarify the specification that how many embodiments are exactly included in the present invention.

Conclusion

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ohkuma et al. discloses a video signal recording/reproduction system including digital modulators, format circuits, recording amplifiers, data detectors, and digital demodulators.

Mochizuki discloses a spread spectrum communications system including spread spectrum modulators, synthesizers, correlators, and spread spectrum demodulators.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to **Young Tse** whose telephone number is **(703) 305-4736**.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, **Stephen Chin**, can be reached at **(703) 305-4714**.

Any response to this action should be mailed to:

Commissioner of Patents and Trademarks

P.O. Box 1450
